BO FETHE

DATA SCIENTIST | TAMPA, FL

STATEMENT

I am passionate about solving geoanalytical problems and building interactive visual tools for data-driven solutions. I have worked with GIS since 2013 in multiple sectors using ArcGIS Pro and other ESRI products as well as open-source software and programming languages. Additionally, I am the systems administrator of the Tampa Bay GIS Users Group and a member of the Tampa Bay Data Science Group. An example of the work I have provided can be found on my GitHub here.

EDUCATION

Current
M.S. Analytics
Georgia Institute of Technology

2012
B.S. Environmental Science, Minor in Biology
University of North Carolina, Wilmington

TECHNICAL SKILLS

Python	D3.js
R	GIS
SQL	Azure
Git	ETL
Shiny Apps	Tableau

KEY CAPABILITIES

ArcPy, ArcGIS API, GeoPandas, Pandas, NumPy, SciPy, Seaborn, BeautifulSoup

k-Means, kNN, Regression, Data Visualization, Statistics, Linear Referencing, Simulation

ArcGIS Online, Azure, Google Cloud Platform

RECENT PROFESSIONAL EXPERIENCE

Solutions Engineer

Hillsborough County BOCC - Tampa, Florida
December 2023 – Present

- Create and schedule python scripts to automate data pulls and update public facing applications.
- Create and update applications using ArcGIS Maps SDK.
- Administer the organization's Azure DevOps for version control and Agile development.

GIS Team Lead/Geospatial Systems Developer

HNTB - Tampa, Florida
January 2022 – December 2023

- Manage the Tampa GIS department for a transportation engineering firm.
- Develop tools in python and R to analyze large datasets and predict spatial and temporal trends in ArcGIS Pro.
- Build interactive dashboards and applications in ArcGIS Online and manage geospatial databases and web services.
- Collaborate with other team members and incorporate Kanban and Git for documentation and version control.

Environmental Scientist

HNTB - Tampa, Florida
March 2018 - January 2022

- Desktop analysis for environmental impacts on proposed improvements using ArcGIS Pro, ArcMap, and python.
- Develop spatially-enabled field collection applications to improve accuracy and processing time.
- Project management for local, state, and federal-funded transportation projects.
